PROJECT SCOPE STATEMENT

Project Name	Team Q's Scheduling Application (Q-Cor)

Project Deliverables	Detailed Description
Calendar displaying the important dates/events	This calendar will display the days of the month. Within these dates, user manipulated events or important deadlines can be added and displayed here.
Add/remove/amend dates	The user will have the option to manipulate the calendar by adding new events, removing old events, or amending pre-existing deadlines.
Invite others to the calendar	There will be a sharing feature that will allow users to share a particular calendar with other users for the purpose of group project management, or keeping people within a common course up to date. Users who have been invited will have the option to manipulate the calendar in the same way the creator can. There will also be an option to import group activities to your personal calendar.
In-app messaging	There will be a built-in chat feature that will allow users to message one another. You will be able to message people within the same shared calendar to coordinate meetings or to communicate topics/study sessions.
Better organization of calendars and their items	In order to better organize the calendar, we will add organization features like colour coordination for differing courses/projects. We will also include prioritization options to better outline more important deadlines
Support the separation of personal and shared calendars	Have an option for an individual user to be able to create a personal calendar as well as group calendars and keep them separate since not every individual user shares the same projects/classes

Project Exclusions

[Indicate anything that will not be included in the scope of the project.]
